21 Enrichment Clubs	22 Fall Scavenger Hunt @ Friendship Park	23 Early Release Day No Program	24 Enrichment Clubs
28 Enrichment Clubs	29	30 	31 Enrichment Clubs

Welcome Back LearningWorks Families,

This fall, students will explore an engineering unit called *In Good Hands: Engineering Space Gloves*, which is part of the Engineering Adventures curriculum developed by the Boston Museum of Science. Engineering Adventures is a curricular program that introduces kids to engineering and the Engineering Design Process. Throughout this unit, kids will learn about material engineering and work to engineer a model space glove that protects against the hazards of space.

There are many reasons to introduce children to engineering in elementary school:

- Children are fascinated with building and taking things apart to see how they work. Engineering encourages these exploration
- Engineering fosters problem solving skills
- Learning about engineering will increase students' awareness of and access to scientific and technical careers
- Engineering and technology literacy are necessary for the 21st century

In addition to engineering, students will participate in daily physical activity, be provided a healthy snack and participate in an afternoon meeting. During afternoon meeting students and staff fostering positive relationships, teach and practice social emotional skills, and build community. Twice a week students have a choose time, Enrichment Clubs. Enrichment clubs allow students to learn new skills such as dance, music lessons, theater, explore technology, create with arts and crafts, and more. Occasional field trips will be planned to enhance students after school experience. Reminders can be found on monthly newsletters, email and on our facebook group; LearningWorks Afterschool- Waterboro.
